

Compare RESILIA™ to other frameworks

Competing Best Practice / Standard	Difference between competition and RESILIA BP	Benefits of RESILIA
ISO27001	A management standard that is focused on the creation of an information security management system (ISMS). Organizations can be accredited against it. Designed to align with ISO20000 (Service Management). Controls are detailed in Annex and in detail in ISO27002	RESILIA has a greater focus on resilience and the recovery of operations in the inevitable event of a breach. It has been designed to align with ITIL (Service Management).
ISO27002	114 controls in 14 areas	RESILIA focuses on processes rather than controls, therefore providing the 'how to' rather than the 'what to'.
Cyber Essentials Scheme	Scope is only focused on five technical controls – <ol style="list-style-type: none"> 1) Boundary Control (i.e. firewalls) 2) Configuration Management 3) Anti-Malware 4) Access Control 5) Patch Management. 	RESILIA is globally applicable, whereas the Cyber Essentials Scheme is aimed at UK only. RESILIA provides processes for resilience including personnel and procedural controls and is therefore more holistic and far more comprehensive. It also offers individuals to gain Foundation and Practitioner certifications.
NIST Cyber Security Framework	98 control areas in five areas covering – <ol style="list-style-type: none"> 1) Identify 2) Protect 3) Detect 4) Respond 5) Recover. 	RESILIA has more of a focus on the resilience aspects of Cyber. It includes practical guidance within the Best Practice, as opposed to simply sign-posting to other standards. It also offers individuals to gain Foundation and Practitioner certifications.
